

Automate Field Inspection Management

The Fulcrum field inspection management platform enables you to close the loop on your field inspection program to increase productivity, drive operational excellence, and improve safety and quality outcomes organization-wide.

End-to-end field inspection control and visibility

Fulcrum is the only field inspection management solution available that improves productivity through digitization of inspection processes, provides superior control over inspection tasks and issue resolution, and enables 360° visibility into inspection-related safety and quality operations.

Digitize inspection processes

Increase inspection productivity and harness the resulting data: Ensure accurate, complete, timely inspections and automatically drive the resulting inspection data in real time across your organization.

Drive intelligent automation for inspection teams

Ensure on-time inspections and eliminate inspection bottlenecks: Streamline planning and team management through real-time scheduling and status visibility.

Reduce time and cost risk: Leverage visibility into field safety and quality issues – by location and in real time – and collaborate across teams to plan and track timely issue resolution.

Enable data-driven reporting and analytics

Promote continuous organization-wide safety and quality improvement: Obtain actionable insights from real-time inspection data through reports, performance dashboards, and location-aware analytics.

"Fulcrum helps us improve processes and make our work environment safer by streamlining inspections, surfacing inspection-related insights, and managing follow-up actions. Once you close the loop from action to insight to further action, the possibilities are limitless."

James Watts

Director of Health and Safety

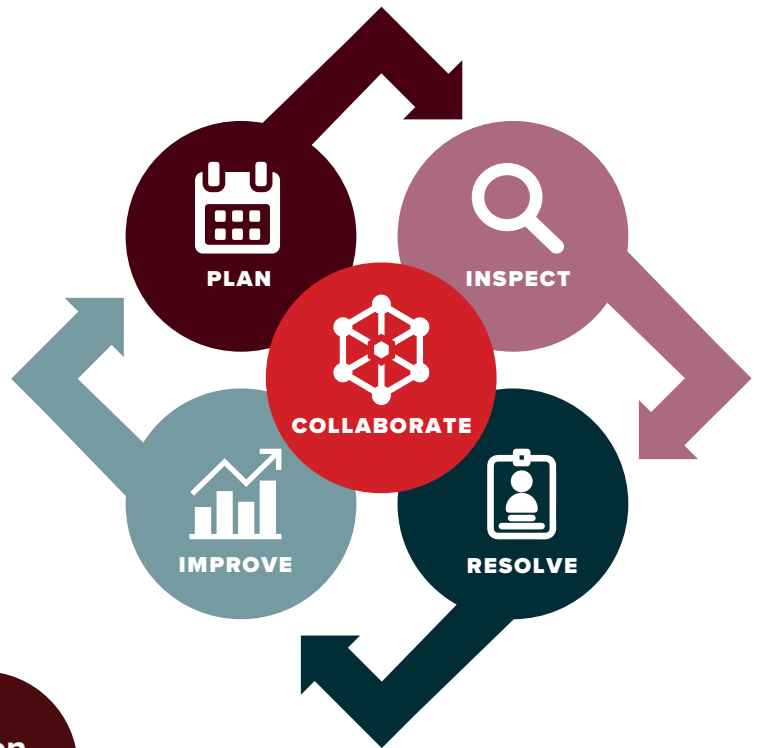

Snively Forest Products

Don't just **collect** inspection data — **act on it!**

How it works

Fulcrum makes managing your field inspection programs easy. It ensures that you're not only collecting the right safety and quality data, but also acting on it to drive efficiencies and reduce risk across your organization.

Fulcrum's platform closes the loop on your field inspection program, from inspection to insight to action, allowing you to leverage data and status visibility at every stage.

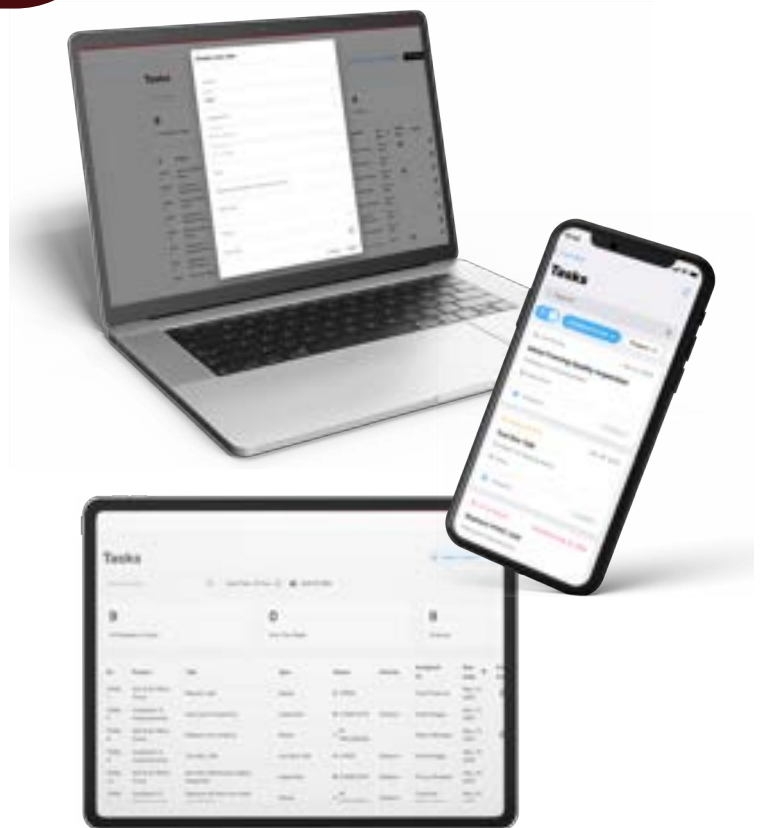

PLAN

Gain visibility and control of inspection task planning

Assign and schedule the right type of inspections using simple checklists or custom inspection apps.

Give field teams easy access to assigned tasks and due dates on their mobile devices.

Monitor real-time inspection status information with task management dashboards.

Ensure all inspections produce timely and complete reporting of safety and quality issues

INSPECT

Capture safety and quality issues whether surfaced during inspections or on-the-fly.

Extend real-time issue reporting to outside stakeholders through QR code access.

Identify and manage issues unique to fieldwork with automatically surfaced geographic insights.

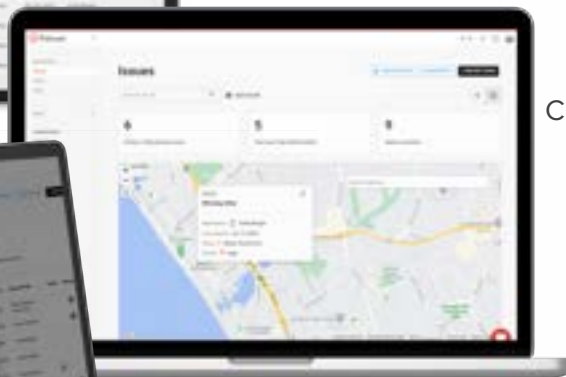

RESOLVE

Reduce risk with end-to-end issue resolution planning, visibility, and documentation

View all issues in one simple dashboard with assignments and resolution statuses by team and location.

Collaborate across remote sites and teams with location intelligence related to all reported issues.

Drill down into remediation detail and assign follow-up actions.

Drive improvement and eliminate bottlenecks with data-driven inspection insights

Focus your whole organization on the right issues with real-time inspection program visibility.

Visualize issue clusters, status across dispersed teams, and more with automatic location tagging.

Attain enterprise-wide safety and quality insights with your inspection data in BI, GIS, and analytical dashboards.

COLLABORATE

With all users and stakeholders connected on one easy-to-use platform, Fulcrum makes it easy to get real-time, organization-wide visibility that puts your safety and quality data and insights into action.

See firsthand how Fulcrum's platform closes the loop on field inspection management to help you increase inspection performance, ensure compliance, drive continuous improvement, and deliver better safety and quality outcomes at every stage. Sign up for a **free trial today!**
