Fulcrum

Data Sheet

The field operations management platform for environmental compliance teams

Your permit, SWPPP, and sampling plan all assume the field record is complete and ready on demand. For many compliance teams, though, it still lives in paper forms, generic form apps, spreadsheets, and email threads.

Fulcrum keeps all of it in one place, from the first field note to the final agency report.

The cost of scattered tools

Incomplete records
Missing fields, unlocated photos, and inconsistent entries surface when they're too late to fix.

Stalled findings
A failed inspection or an exceedance waits in an inbox while the clock keeps ticking.

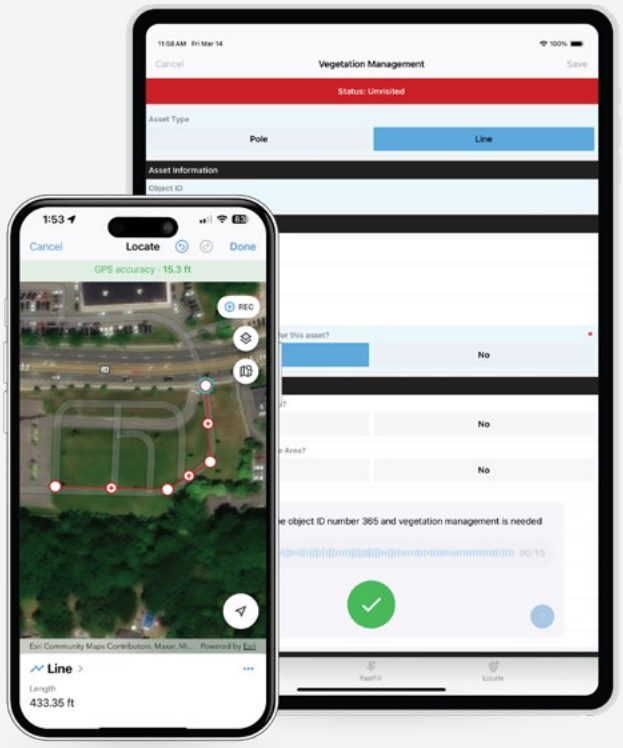

Reports rebuilt by hand
Retyping field notes into reports eats up staff hours and introduces new errors.

Capture it right the first time

With Fulcrum, every inspection and sample reaches the office complete, located, and correct before your team leaves the site.

- **Required fields and validation logic** stop incomplete or out-of-range records before they ever sync to the office.
- **Conditional questions** show inspectors only the fields that apply to what they find on site.

30%
fewer hours spent managing field data and performing quality assurance

> The biggest thing in this business is to have the answers when the questions get asked. That's why we use Fulcrum.

DIEHLUX **Colin Diehl**
CEO and Co-Founder

- **Audio FastFill** lets inspectors complete forms hands-free by voice while they keep their eyes on the work.
- **GPS location, timestamp, and photos** attach to every record automatically, tying each observation to the right site and date.
- **Two-way ArcGIS integration** pulls site and asset layers into the field and pushes completed records back to your compliance map.

Act on findings

- **Workflow automations** route failed inspections and exceedances to the right owner as tracked corrective actions.
- **Due dates and follow-up steps** come from your own app design, so every handoff matches permit requirements.
- **Status views** show supervisors open corrective actions by site, and closed items keep their full history for the next audit.

Report without the rebuild

- **Report templates** turn approved records into permit-ready reports, with photos and locations already in place.
- **Fulcrum Insights** answers the questions your reports need to cover, like which outfalls missed their quarterly inspection.

Prove what happened

When an inspector or auditor asks for documentation, you can pull up the complete history of any record on the spot.

- **Automated audit trails and record history** show who captured, edited, and approved each record, plus the where and when.
- **Role-based access** controls who can view, edit, or approve records across sites, programs, and consultants.
- **Enterprise security** protects every record with ISO 27001 and SOC 2 Type II compliance, single sign-on, and automated user provisioning.

An app for every program

Teams use Fulcrum for environmental compliance across programs including:

- SWPPP and stormwater inspections
- Groundwater and water quality sampling
- Remediation monitoring
- Wetland and permit-condition monitoring
- Hazardous waste facility inspections

Build an app with drag and drop from scratch or starting with a **template**, or use AI to build through the MCP connector from a plain-language description. Either way, every app includes offline sync, GIS, validation, and security from the start.

Build your next audit in the field

Schedule a demo to see how Fulcrum turns your fieldwork into records that hold up under review.
