Fulcrum

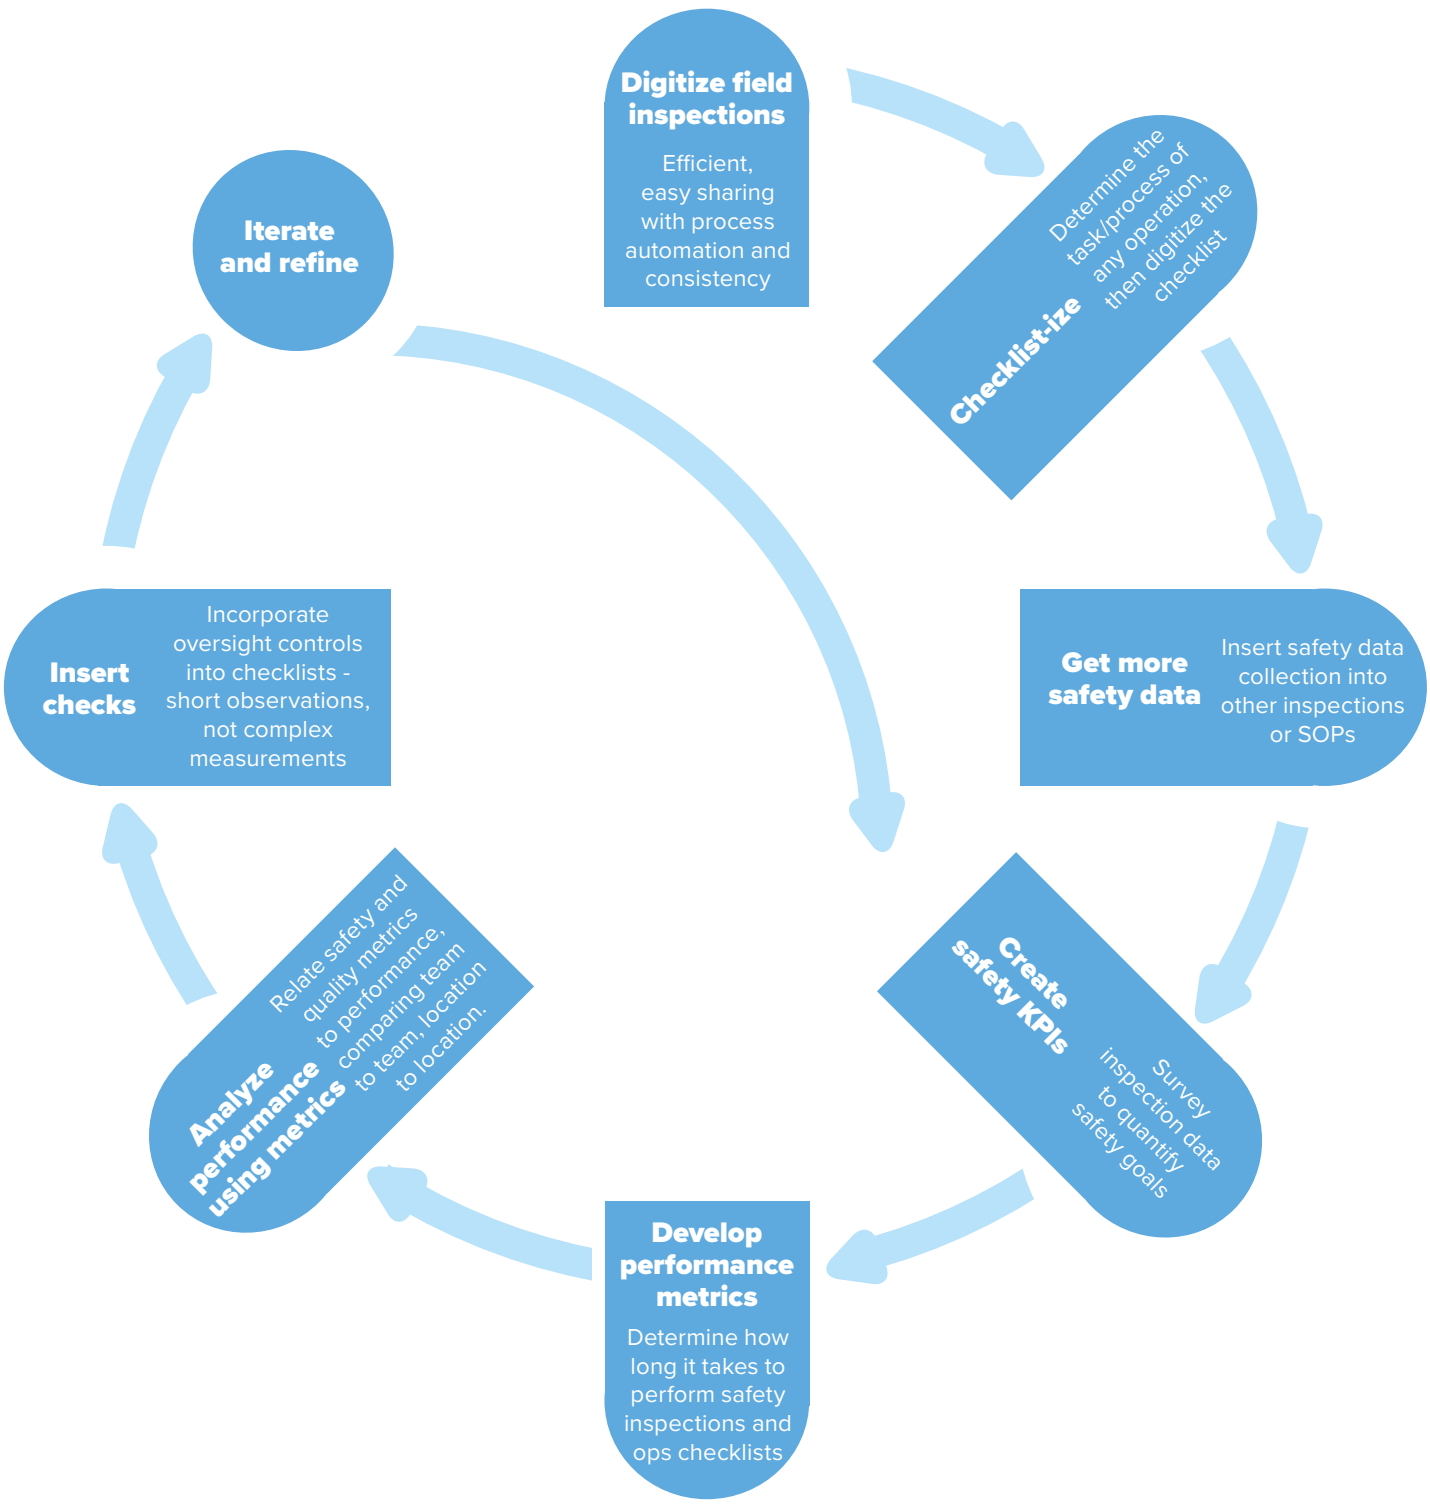
Developing a data-driven field safety program

When you're doing field inspections with a pen and paper, your inspection process is likely pretty limited:

1. Do inspection
2. Put field inspection paper form in a folder
3. Never look at it again

It's highly unlikely that anything that's discovered with this field inspection will be analyzed, and virtually impossible that it will give insights that allow you to continually improve your organizational processes.

Below we identify how digital field inspections allow for constant learning, rethinking, and upgrading of the process in each iteration.



Imagine trying to do all this using pen, paper, and a clipboard! It's clear that above process improvement would be impossible with anything other than digital inspections. Luckily, we've got the perfect digital tool for the job: Fulcrum field inspection management! Fulcrum helps users:

- Ensure inspection rigor and compliance at scale
- Maximize field team performance and agility
- Create real-time visibility into inspection performance
- Harness the value of location for mobile teams
